FEATHER FLAGS, 2.5' X 15', PARASAIL, SCUBA DIVE, BANANA RIDES, YOU NAME IT!

BANNERS FOR THE TOWLINE.....ANY MESSAGE

VERY AFFORDABLE! SAVE MONEY!

Sport Chutes is your one-stop-shop for all of your commercial parasailing and inflatable watersled needs with decades of experience with trusted names and trusted service!

We have been serving the commercial parasail and watersled market continuously since 1983 and are the world's largest supplier. We were the originators in the development of the commercial winch boating industry and we were the ones who introduced inflatable watersleds to the commercial marketplace in the 1980's. We have been in business longer than anyone in the US and we have helped many parasail and

watersled operators get started and make money in the business. Sport Chutes has always been and will always be YOUR BUSINESS PARTNER who genuinely cares. We repair what we build and all other brands of chutes with *FAST* same day turn-around service. All repairs are made in house and return the chute to original operating specs. Plus, repairs are reasonable priced. Give Sport Chutes a try on your next repair or go through the old closet and send us your damaged goods and see if we can save you some money. Why buy new if a damaged chute can be repaired?

With the decades we have been in business, we've sold more chutes and watersleds than anyone in the world. Our brands are trusted brands and each of our products has many, many years of commercial service, design and experience behind them. If you have never tried one of our products, we know you will be pleased as we have stayed in business this long because we sell excellent products and go out of our way to keep customers happy. We build all parasails and parasail accessories at our factory (we own the building – 9,000 sq. ft.) in Addison (Dallas, TX, USA) using only the finest quality American made goods. We are adequately staffed with full-time employees and perfectly equipped to serve your special needs for special colors, designs, features, logos, etc. on our chutes. We answer the phone virtually 24/7 as we know your business needs do not start and stop from 9 to 5. If you need a favor or have a very special need, just ask and we will look for every reason to say "Yes" instead of "No".

Regarding custom logos and lettering for the chutes, *we were the pioneers*. We were the ones who introduced chute advertising to the US marketplace back in the 80's. All of our chutes are expertly designed and user friendly as the ergonomics aspects are always considered in the development of all of our products. All of our products are designed with the end user in mind are therefore constantly under research and development. Thus, your feedback and field input are extremely important to us to ensure our products are always on the leading edge of the marketplace. And, you get your new custom-made chute when YOU need it – you will not experience long delays as you tell us when you need it and that's when you will have it!

We offer the broadest selection of chute and watersleds anywhere in the world. We offer all of the sizes from 21' to 40' and prices you'll love. No matter the job, we have a chute which is right for you, and if you want something special; we'll build it. We are

also working on some new models of parasails to address specific different needs that we're sure you will be interested in, so give us a call and we can discuss this. And if you have an idea, call us and we'll build it!

"Diamond" ripstop and exclusive to Sport Chutes ONLY!

Check out our 1.9 oz. "Diamond" ripstop. Chutes last 50% longer than anything on the market with no weight gain! If you haven't tried it, give it a shot and save money with a longer life!

We are the only parasail company in the world who offers the premium "Diamond" ripstop. It is 50 % stronger warp and 80% stronger weft than generic balloon cloth offered by others (and no heavier). Diamond means better colors, less fade and no color bleed and is exclusive to Sport Chutes. This means you get the best performing, longest lasting, best looking chutes on the market with the best service, 24/7. Best suited for chutes under 34'.

Sport Chutes offers 21' to 40' chutes, anything you need!

Sport Chutes has been the innovator in the industry and we have designed most of the chutes you fly today and others have copied our designs. In order to compete against us, some manufacturers have created confusion in the marketplace with odd sizes and model numbers. So, the numbers on chutes CAN be confusing. Usually the numbers do not mean anything, except they are MODEL NUMBERS. GENERALLY, the higher the number, the larger the canopy and the more payload it will hold. Also, the lower the winds you should use it in. However, just because one company calls a chute a larger number, don't assume it IS larger than another company's chute because the number is greater. In fact, after explaining how to measure chutes, we have had many surprised winchboat operators! For instance, what some call a 30, we were shocked to learn that, upon examination, the so-called "30" is the SAME SIZE as what we call a 26!! So, just because a number on the chute is larger, don't assume that the chute is larger. We would be glad to tell you how to measure what you have so you can accurately determine your needs and make an informed decision. Do you really know the size of

chutes you are flying? Be sure you know what you are flying and we can help explain it all and keep it simple so call us at 972-661-1166.

We build to suit. We offer many design choices like Double "D" rings on the yoke, large higher wind adjustable locking zippered vents (we pioneered this and is copied by everyone today), inflation straps, color coding of risers, hybrid chutes (1/2 light weight ripstop and heavier ripstop on vents to prevent or reduce tearing, etc. Give us a call and have it built your way.

Sky King High Lift Commercial Chutes

Material: 1.9 oz. ripstop (Diamond) for chutes 34' or smaller, or 1.3 oz. Aerostar (Light) for chutes 34' and larger, both UV treated to resist the sun effects and are zero porosity will not air blow through). These are performance ripstops made for air sports, not for generic use and is made in America!

Colors: Any you want, any pattern at NO EXTRA CHARGE! And, we're FAST! Barring anything unusual, all custom chutes are delivered in the same or next week you order.

Hardware: All heavy duty American made stainless steel, everywhere!

Lines: Braid on braid, thick as a pencil. No stretch, easiest on the hands and tangle free. 1,2 and 15,16 lines are color-coded for easy identification and are sewn and wrapped at riser end to prevent splitting.

Yoke: THE BEEFIEST around! Stands up best to any winchpost; is the thickest and most durable, bar none. All yokes reinforced for long wear with 7,000 lb. test nylon webbing.

Crown: High tensile strength webbing.

Vents: All reinforced for additional strength. All open vent seams have encased webbing for additional strength.

Adjustable wind vents: Large adjustable, zippered wind vents at 5:00 and 7:00 on the chute so higher winds can be relieved. This allows a user to fly the same chute if winds pick up a little by opening the zippered vents.

Trim Zippers: This is a standard feature on all chutes and allows for adjustment if the chute cocks a little to one side or the other due to damage or extended use.

Inflation straps: Standard on all commercial chutes...allows for easier off the deck inflation.

Double "D" rings on yoke: This is an optional feature on all commercial chutes and allows for a rider to fly in front of the back passenger much like on a bicycle or a horse.

Shark Inflatable Watersleds

Sport Chutes has been designing and manufacturing inflatable watersleds since the early 80's. We started the watersled craze and introduced the idea of "Big Banana" rides to the commercial watersport operators. We showed watersports operators how to make money through selling rides as a compliment to the parasailing. Our designs are a product of the unit being used in extreme rental situations in very UV intense climates for more than three decades. All of the features of these units incorporate research and development findings in very rigorous commercial environments. Our units are the most copied in the world and range in size from 6 seats to 12 seats in a row or side by side design or our shuttle with a rounded nose. They all have many useful features which make the units work better and last longer. Our Shark is made of 1100 denier PVC (construction and material like Zodiac boats). Features on the units include reinforcement seat and foot pads, can be pulled from either direction (not Shuttle), mostly seamless construction (or hidden seams), padded handles, etc. Our newest addition, the "Shuttle" is a 6, 8, 10 or 12 seater that is a combo riverboat/watersled design we created so parasail operators running off of "no propeller" beaches can pick up passengers. This unit is towed by a Wave Runner to the beach or dock where parasail passengers can board. They are then transported to the parasail boat offshore. This way the passengers get two rides for the price of one and it is a cheap way to exchange a lot of people without having to go into the marina area.....this saves gas and time. This model is also very stable and popular with camps and individuals.

32' Paracraft USA Commercial Winchboats

The idea of starting a commercial watersports business was the sole idea and dream of Sandy Clark in 1983. Sport Chutes was incorporated that year and the dream of providing tough, reliable unique watersports products to the leisure and commercial market was realized. Sport Chutes has grown up with the industry and if an operator was in business back then, they relied on Sport Chutes and the owner, Sandy, to

provide the best quality products and services at competitive, reasonable prices. Well, nothing in that regard has changed in the last several decades of continuous business. Sport Chutes is still doing that and we would like to get the word out to new operators who were not there when all parasailing was done off of beaches or stationary or motorized platforms.

Winch boats were a new product in the late 80's and early 90's and evolved due to a need to get the ropes off of the beach and to allow a controlled ascent and descent making the industry more insurable. Because operators were unhappy with the two winch boat choices on the market, Sandy purchased Paracraft out of England renamed it Paracraft USA and began manufacturing the boat in Texas.

Paracraft is a hand-laid fiberglass boat built of hyper-light construction (gas or diesel options). It rides dry and very well in the water and makes chute inflation easy. It holds 6 paying passengers (12 in the islands were a U.S. Coast Guard license is not required) and two crew. Every boat we have sold is still operating as far as we know and if sold used, our boats go for top dollar. The winch is power-on-demand and is very reliable. The boat maneuvers and handles extremely well in any sea you would want to go out and fly in. If you are in the market for a new boat in the near future, do yourself a favor and check it out. You will be impressed with its sexy lines and ease of operation, and cost.

Our great deals and fantastic products and services are waiting for you! So give us a call! And when you think "chutes" think of the FIRST NAME in "chutes", "SPORT CHUTES"!
